Hi António,

Yes, I grant you permission to redistribute the game as a Slackware package, as long as the package includes a link to the original game page and you specify that donations would be appreciated.

PS: Download the latest version from itch.io because I just updated the game, removing the copyright symbol from the title (see attached image). Since it's not my original title, it seemed appropriate.

Regards,

Luca

Hi,

I played your space invaders game on pc and really enjoyed it.

Since I am a Slackware Linux packager on slackbuilds I was wondering if you allow it to be redistributed as a Slackware package.

Thank you in advance.

Kind Regards,

António Leal
