

NAME

tformat – reformat text

SYNOPSIS

tformat [**-h**] [**-c cols**]

DESCRIPTION

The **tformat** utility is a filter that reads text from standard input, reformats it, and writes the resulting text to standard output. The text is formatted to fit within the specified number of columns, wrapping words as necessary. Extraneous whitespace is also removed.

OPTIONS

-c cols

Specify the number of columns, *cols*. The default value is 78. The text is formatted to fit in this many columns. The value *cols* may be between 10 and 200, inclusive.

-h Display a command synopsis and copyright message.

NOTES

Long words that do not fit on a single line are split.
